A SMALLER SPACE FOR A FULLER LIFE

WorkLife

User manual

A practical guide to planning your time, checking in with yourself, and making room for life beyond work.

YOUR GUIDE AT A GLANCE

01 Install, sign in, and set up your profile
02 Use Home for today’s check-in and checklist
03 Build a time plan in Schedule
04 Create linked goals and track weekly progress
05 Read Insights and update Profile
06 Use the workspace tools if you have admin access

FOR ANDROID

This guide describes WorkLife 1.0.1 (build 2). The installed app runs from its home-screen icon; Flutter or a computer is not needed for everyday use.

01 / FIRST STEPS

Install, sign in, and set up

Install the Android app

1. **Open the APK file.** If you received WorkLife as an .apk, open it from Downloads or the file-sharing app you used.

2. **Confirm installation.** If Android asks, allow the file app or browser to install this app, then return and tap Install.

3. **Keep the app handy.** Tap Open after installation. WorkLife should also appear in your app drawer; press and hold its icon to place it on your home screen if Android did not add it automatically.

Choose a sign-in method

- Google: On the welcome screen, choose Continue with Google and select your account.
- Email: Choose Use email instead, enter your name, email address, and a password of at least six characters, then register.
- Email accounts must be verified before login. Open the verification message sent to your inbox, follow its link, and then return to WorkLife.
- If you already registered, use Log in. Use the password-reset option on that screen if you have forgotten your password.

Use the same account each time
Your profile, schedule, goals, and check-ins are associated with the signed-in account. Switching sign-in methods or accounts can show a different profile.

Complete your first profile

1. **Add your details.** Enter your name, job title, and company or organization.

2. **Set your routine.** Choose work start and end times, select at least one workday, and enter your usual one-way commute. Sleep and rest targets help the app describe your day.

3. **Choose what matters outside work.** Select hobbies and interests, personal-life activities, and side quests. You can add your own entries in the available text fields.

4. **Finish setup.** Tap Finish setup to save your profile and go to Home. You can adjust your personal details and routine later in Profile.

WorkLife is organized around five tabs: Home, Schedule, Goals, Insights, and Profile. Tap a tab in the bottom navigation to move between them.

02 / EVERYDAY USE

Home: today in one place

Home brings together your balance snapshot, daily check-in, today's schedule, and today's checklist. The greeting uses the time of day and your profile name.

Save today's check-in

1. **Choose how you feel.** Pick one mood: Great, Good, Okay, Off, or Low.
2. **Rate your energy.** Move the energy slider from 1 to 10. The saved score feeds the weekly energy trend in Insights.
3. **Set today's work status.** Turn on "I'm working today" when appropriate. Workday routines can then be added to today's schedule using your saved work hours and commute.
4. **Review sleep and meals.** Set the sleep and wake times and mark breakfast, lunch, and dinner as appropriate.
5. **Confirm your wake-up time when asked.** A new 24-hour balance window needs your actual wake-up date and time. Choose a time in the past 24 hours; it cannot be in the future.
6. **Tap Save check-in.** WorkLife saves your mood, energy, meal status, sleep times, and work status for today.

One saved check-in per day
Saving again updates that date's existing check-in. It does not add another daily count to the Insights trend.

Use Today's schedule and checklist

- Review today's time blocks in the Home schedule section. Add a time block from Schedule or from Home's plus button.
- Today's checklist combines active goals for today with checklist activities. Check an item to mark it done; the same goal progress appears in Goals.
- If a goal has lost its linked schedule activity, use Link in the checklist to attach it to an activity on that date.

Add something from Home

Tap the floating plus button and choose one of these actions:

- Plan a time block — add a titled block to today's schedule.
- Add to today's checklist — create a checklist activity.
- Add a daily focus — open Goals to create a goal.

Some Home suggestions also include Add to today's schedule. Choosing it opens the time-block form with the suggestion filled in.

03 / PLAN YOUR TIME

Schedule

Schedule is a weekly calendar and a time-ordered view of the selected day's blocks.

Move around the calendar

- Tap a date to see that day's schedule.
- Use the left and right arrows to move one week at a time, or swipe horizontally across the calendar.
- Use Today beside the selected day to return to the current date.
- The selected date and the day list below it stay in sync.

Add a time block

1. **Tap Add activity.** The event form opens for the selected date.
2. **Give it a title and life area.** Choose Work, Commute, Sleep, Rest, Meals, or Life.
3. **Set the date and start/end times.** The event stays within one calendar day. A valid block needs an end time after its start time.
4. **Add a note if useful, then save.** The new block appears in the selected day's schedule.

Overlapping blocks
The app checks for a time overlap before saving. If it reports an overlap, adjust the start or end time and try again.

Change or remove a block

- Tap a saved block to edit its title, category, date, times, or notes.
- Open the block's options menu and choose Delete time block to remove it. Confirm the deletion.
- Routine work blocks may be created from the work hours and workdays in your profile when you mark that you are working today on Home.

If a day looks empty

Make sure the right date is selected. Add activity creates a block for the selected day; routine work blocks appear only when the routine and that day's work status call for them.

04 / KEEP INTENTIONS VISIBLE

Goals

Goals are small, date-based intentions. The weekly progress card counts goals in the current week and how many are complete.

Create a goal

1. **Tap New goal.** Choose a day type: Workday, Family day, Personal day, or Wellness day.
2. **Choose Today or Tomorrow.** When editing an existing goal, use its date control to choose a date.
3. **Name the goal if you like.** The name is optional; if left blank, WorkLife uses “Focus for” and the selected day type.
4. **Choose a Schedule anchor.** Select the scheduled activity this goal belongs to, then save. If there are no activities for that date, add a time block in Schedule first.

Update goal progress

- Use the goal’s Check-in/completion control on Goals or its checkbox in Home’s Today’s checklist.
- Use the edit icon to change a goal. Use the goal’s options menu to remove it.
- Goals dated today also appear on Home’s checklist, so completing one from either screen updates the same goal.

05 / NOTICE YOUR PATTERNS

Insights

Insights turns scheduled time and Home check-ins into a weekly overview. Use the week controls on the screen to review earlier or later weeks.

- Weekly balance ring: summarizes seven 24-hour windows using Work + commute, Sleep, Personal life, and Free time. Free time is the part of each day’s balance window not allocated to the other categories.
- Work time and Personal time: summarize the week’s recorded time and compare it with the previous week.
- Your week at a glance: shows daily work and personal time from recorded schedule blocks.
- A pattern worth keeping: offers a reflection based on the check-ins available for the selected week.
- Your energy this week: plots the saved 1–10 energy score by day and shows the average, difference versus last week when available, and number of days with a check-in.

What makes Insights more useful

Save one check-in on more days and keep your schedule blocks up to date. A day without a check-in has no energy point; the chart needs at least two days with scores to draw a trend.

06 / YOUR ACCOUNT

Profile

Profile stores the details and routine used across WorkLife.

Edit personal details

- In Personal information, tap the edit icon to change your name, job title, or company.
- Your sign-in email is shown with your account details but is managed by the account owner and is not editable in this form.

Edit your work routine

- Tap the edit icon in Work routine to change work hours, workdays, one-way commute, sleep target, or rest target.
- Choose at least one workday. Enter commute in minutes; sleep and rest targets can be left blank.
- Routine updates affect future planning and workday schedule suggestions.

Sign out

Scroll to the account actions and choose Log out. You will return to the welcome screen and need to sign in again to see your account.

07 / WORKSPACE TOOLS

Admin dashboard and user management

These tools appear only for a verified administrator account. Regular WorkLife accounts do not have access.

Dashboard

- Total users counts Firestore user profiles.
- Stored records totals activities, check-ins, goals, and schedule entries. Records by type breaks the total into those four groups.
- Pull down to refresh. If a load fails, check the message and tap Try again.

Users

1. **Search for a profile.** Enter at least two characters and submit the keyboard search or tap the arrow. Search matches a person's name, email, or user ID.

2. **Filter the list.** Choose All users, With email, or Without email.

3. **Review details.** Tap a profile or Details to view its name, email, user ID, job title, and company.

4. **Edit basic details.** Use the pencil or Edit profile to change name, job title, or company, then Save. Email is read-only in this app form.

- The list loads in pages. Use Load more users at the bottom when it appears.

Administrator access is assigned outside the app

Only a trusted Firebase project operator can grant or remove the admin claim. The mobile Users screen does not let an administrator change another person's role.

08 / WHEN SOMETHING GOES WRONG

Quick troubleshooting

If you see…	Try this
Can’t log in	Check the email and password. Email registrations must be verified first. Use the password reset link if needed.
Google sign-in fails	Check your internet connection and choose the intended Google account. If the email was registered another way, use that sign-in method.
Profile or records do not look familiar	Confirm you signed in with the same account you used when creating them.
Check-in will not save	If a new balance window is needed, confirm the actual wake-up time. Choose a past time within the last 24 hours, then save again.
Schedule will not save	Check that the end is after the start and that the new block does not overlap another block.
Insights has no energy line	Save energy check-ins on at least two days in that week. One check-in gives a score but is not enough to draw a trend.
Goal cannot be saved	Choose a scheduled activity for the same date. Add a time block first if the Schedule anchor list is empty.
Admin screen shows an error	Check connectivity and retry. For access denied, sign in with the verified admin account; contact the workspace operator if admin access is missing.

A few useful terms

- Time block / schedule event: a titled item with a date, life area, and start/end time.
- Checklist activity: a to-do item on Home; it is separate from a timed schedule block.
- Schedule anchor: the timed activity a goal is connected to.
- Check-in: your daily mood, energy, sleep, meals, and work-status record.

The app saves account data through its Firebase services. If a screen reports that data could not load or save, check your connection and try again. Do not share your password or verification link with anyone.
